- Built-in Search Engine Optimization Tools.
- Google Checkout, Paypal and Amazon Payments integration

Top reasons to choose 3DCart

The easiest way to start selling online

There are literally hundreds of shopping cart solutions out there. But most of them have the same flaw. They were developed by programmers, for programmers. The control panel makes a lot of sense to a programmer, but the average user has a hard time figuring things out. 3DCart was developed with the end user in mind, and so all of its features are easy to setup and use. We've included help pop-ups in just about every screen of the administration module, as well as provide Easy Setup Wizards, Tutorials and Videos on using the application. Most of our users learn the basic system functions such as how to add products, process orders, and contact customers within minutes!

Over 1000+ powerful shopping cart features

You get all the tools needed to make your online store a success. 3DCart's easy-to-use features give you everything you need to start selling online. We have more features than any other shopping cart in the market.

Reach more visitors

3DCart is the most Search Engine Optimized shopping cart with pre-built SEO tools that will help you reach top listing for your keywords. All sites get SEO Friendly HTML URLs, Search Engine Friendly Feature, customize your metatags, and utilize an xml sitemap, breadcrumb trail and more. With easy to create content, you'll be on your way to great search engine results in no

time.

Unlimited technical support

All accounts include completely free and unlimited Technical Support. Call, email or chat with our friendly technicians and ecommerce experts to get the help you need.

Single point of contact

3DCart is a hosted solution; we handle the hosting, software, and technical support. We are here to help should anything go wrong with any part of your online store. Having a single point of contact eliminates the need to hire technical staff.

No transaction or hidden fees. Low startup costs & flat fees

Startup fee is only \$99, after that, you simply pay a FLAT monthly fee (Starting at \$19.99/mo). Don't be fooled into paying a percentage of your sales, it may seem like a good idea when starting out, but before you know it, you'll be paying in excess of \$1000/month in fees!

Secure Hosting & PCI Compliance

It's true that you can get a hosting account for \$1.00/month, but, chances are, it's not going to be very secure or reliable. In order for that company to make any money, they will have to setup literally thousands of websites on a single machine. This means thousands of potential security issues, as other users on the same machine run scripts that could bring the machine down, or worse, access your website data. At 3DCart we use the largest datacenters in the US, and always setup a very low number of stores per server. All of our servers are protected with hardware and software firewalls, and are scanned daily by McAfee Secure.

How to Switch to 3DCart?

3DCart easy to use Import / Export tools allow you to migrate your data from your current provider into 3DCart. You can transfer Products, Options, Categories, and Customers to get going in minutes.

3dCart Shopping Cart Software

Switch to 3DCart – Quick Migration Guide

Full FTP access allows you to batch upload your product's images, static pages and other elements of your site.

Clean HTML templates allow you to customize the look of your site by modifying just one file that controls the entire look of the site. So bring your current design over, use one of our free included templates or get our designers to provide an entire new look for your store.

As an additional service, you can hire 3DCart's team of developers to transfer the data and design over for you. Within a couple days you can have your products and overall look of the site transferred to 3DCart and go live with your new site.

By switching to 3DCart you can improve your site, get more sales, guarantee uptime to your clients, get higher rankings on the search engines, offer more payment and shipping options, reach more visitors with the built-in marketing tools, and much more.
